Swift playgrounds learn to code 1 answers

Optional Apply Activities

CONNECTED DEVICE (3 class period)

Students can re-create a classic game with a Sphero Edu robot and learn the tactics of game design. They'll get started with basics like aiming, rolling, and adjusting lights, then move on to detecting collisions with the accelerometer and calculating bounce angles. Along the way, they'll use variables and functions. Once they've mastered the basics, they'll begin building their own versions of Pong, the very first popular video game. In the students' versions, the robot will be the ball and students will use their feet as the paddles.

Discussion prompts

- What elements of the game were students able to change? What coding concepts did they use to do so?
- On the Play Sphero Pong page, have students analyze the code before running or editing the code. What does each command do?
- What elements of Sphero Pong could students program in other digital games?

About Swift Playgrounds

Swift Playgrounds is a free iPad app from Apple that helps anyone learn coding fundamentals by writing in Swift.

In Learn to Code 1 and 2, interactive puzzles teach key programming concepts in a way that's both fun and challenging, building confidence and skill. You'll write code to create programs that guide a character through a series of puzzles in an interactive graphical world. The programs you create run right beside your code so you can see how to adjust the code until the puzzle is solved. You can record videos of your programs in action and then share your creations.
